

Water quality monitoring

Multiparameter measuring systems for ground and surface water

- Water level
- Temperature
- Conductivity
 - Total dissolved solids (TDS)
 - Salinity
 - Density
- Dissolved oxygen
 - oxygen saturation
- pH value
- Redoxpotential
- Ammonia
- Nitrate
- Chloride
- Ammonium
- Sodium
- Calcium
- Fluoride
- Potassium
- Chlorophyll a
- Cyanobacteria
- Rhodamine WT
- Turbidity
 - total suspended solids (TSS)

Multiparameter sensors MPS

MPS -PTEC / -D8 / -K16 and MPS-Qualilog -8 / -16

Equipped with up to 12 sensors, by which 16 different water quality parameters can be measured, the SEBA multiparameter sensors provide reliable informations about the conditions at the measuring site.

The multiparameter sensors MPS represent the consequent further development of the SEBA multiparameter product line. The calibration will be performed via user friendly software SEBAConfig. The Availability of high data quality is the base for proper evaluation of the hydrological environment.

To display the measured values the MPS sensors can be combined with the SEBA electric contact meter (mainly for ground

water) or with the SEBA MPSChecker (mainly for surface water). Continuously monitored measuring sites can be equipped with SEBA data loggers with or without data transmission (e.g. Unilog) or with integrated logger.

Designed for robust use in the field the sensors perform under roughest conditions like e.g. in tropic, arid and arctic environments. Rugged and ready for all uses in the field they measure with optimum precision. SEBA sensors stand out due to high long-term stability (optical sensors) together with low maintenance requirements and can be used as stationary or mobile sensors.

MPS- Multiparameter sensors

for depths of up to 500 m (dependent on used electrodes)

MPS-PTEC: Digital multiparameter sensors with RS 485 output and sensors for measuring water level, temperature, conductivity and salinity

Dipper-PTEC: Digital multiparameter sensor with integrated data logger and sensors for measuring water level, temperature, conductivity and salinity

MPS-D8: Digital multiparameter sensors with RS 485 output and up to 8 electrodes in a stainless steel case

Qualilog-8: See MPS-D8 but additionally with integrated data logger

MPS-K16: Digital multiparameter sensors with RS 485 output and up to 12 electrodes in a robust plastic case

Qualilog-16: See MPS-K16 but additionally with integrated data logger

Decisive customer advantages

- **High flexibility:** Connection facility to different terminal devices for mobile and/or stationary application
- **Intelligent modular system:** Individual retrofitting of further parameters within a series anytime possible
- **New optical sensor technology:** Measurement of dissolved oxygen, cyanobacteria, chlorophyll A and rhodamine WT
- **Quick and uncomplicated exchange** of exhausted electrodes
- **Compact design:** Useable in pipes with minimum 1½" and 4" (MPS-K) diameter

Evaluation software DEMASvis

DEMASvis is an elaborate software solution for visualization and editing of measurement results:

- Graphics and lists at a glance!
- Input option for comments
- Automatic correction of hydrographs and lists via check values

Application variants - portable systems

Application variants - stationary systems

Application examples

Portable systems for ground water

The SEBA electric contact meter KLL-Q2 is a unique mobile field laboratory for measuring water quality at ground water measurement sites with minimum 2" diameter.

- compact design
- easy handling
- quick and precise capture of different parameters until max. 500 m depth
- integrated data logger (optional)

Portable systems for ground water

For monitoring of deep drillings SEBA has developed a mobile winch system with electrical drive. The multiparameter sensor is able to measure, display and record water quality and water quality profiles until a depth of 800m.

Special solution with electrical winch.

Portable systems for storage reservoirs

With the electric contact meter KLL-Q-2 water quality and water quality profiles can be measured comfortably in reservoirs or lakes.

- compact design
- easy handling
- quick and precise capture of different parameters until max. 500 m depth
- integrated data logger (optional)

Portable systems for rivers

The SEBA multiparameter system Checker-2 was developed as mobile field laboratory especially for determination of parameters which are significant for water quality in lakes, rivers, channels and sea.

- compact design
- easy handling
- quick and precise capture of different parameters
- integrated data logger (optional)

Application examples

Stationary systems in ground water

Monitoring of ground water quality becomes more and more important globally. By using SEBA multiparameter sensors together with data logger (e.g. LogCom or FlashCom) water quality can be monitored network-independent continuously, online (GSM/GPRS) or offline.

Primarily measured parameters:

- water-level
- temperature
- conductivity
- salinity
- pH value
- nitrate
- etc.

Stationary systems in storage reservoirs

Permanent measurement of water quality in lakes and storage reservoirs is mostly performed by means of moored buoys or pontoons. The multiparameter sensor is dangled at a certain water depth, the complete electronics is installed waterproof in the buoy. The power supply with solar cells allows permanent monitoring of water quality with constant data transmission (GSM / GPRS or radio).

Primarily measured parameters:

- water-level
- temperature
- conductivity
- oxygen
- pH value
- chlorophyll a
- nitrate
- etc.

Stationary systems in rivers

Together with the continuously measuring lowmaintenance SEBA multiparameter sensors, automatic warning systems are installed which display the water quality in real time. Real time water quality measuring are positioned at strategic locations on rivers, e.g. to determine forbidden discharge, to document misconduct, to set off the alarm and therefore to secure water protection.

Primarily measured parameters:

- water-level
- temperature
- conductivity
- oxygen
- pH value
- ammonium
- etc.

Stationary systems in channels

The monitoring of water quality in irrigation channels is essential nowadays. Polluted and saline water damages plants and could cause crop failures. Selected parameters of water quality will be documented by SEBA multiparameter sensors in connection with data acquisition and transmission systems, and, if necessary, alarms will be triggered in the event of border crossings.

Primarily measured parameters:

- water-level
- temperature
- conductivity
- oxygen
- pH value
- ammonium
- etc.

Technical data

Parameter	Measuring range	Accuracy	Resolution	
water level	0-10 m, 0-20 m, 0-50 m, 0-100, 0-200 m, 0-300 m Temperature: -5...50 °C Pressure: 0...10/20 bar	+/- 0,1 % of end of measuring range	0,002 %	
temperature	Temperature: -5...50 °C Pressure: 0...50 bar	+/- 0,1 °C	0,01 °C	
conductivity	0...200 mS Temperature: -5...50 °C Pressure: 0...50 bar	+/- 1 µS/cm (0...200 µS/cm) +/- 0,5% (> 200 µS/cm)	0,001 mS/cm	
total dissolved solids (TDS)	0...200.000 mg/l Temperature: -5...50 °C Pressure: 0...50 bar			
salinity	0...70 Temperature: -5...50 °C Pressure: 0...50 bar	+/- 0,2 (0...16) +/- 0,8 % (> 16)	0,01	
water density	988... 1060 g/l Temperature: -5...50 °C Pressure: 0...50 bar			
oxygen (amperometric)	0...40 mg/l Temperature: 0...50 °C Pressure: 0...10 bar	+/- 0,5 % of end of measuring range	0,01 mg/l	
oxygen (optic)	0...25 mg/l (bei 25 °C, 1013 hPa) 0...40 mg/l (bei 3 °C, 1013 hPa) Temperature: -5...50 °C Pressure: 0...12 bar	+/- 0,02 mg/l (0...2 mg/l) +/- 1 % of measured value (> 2 mg/l)	0,001 mg/l	
oxygen saturation	0...400 % saturation Temperature: 0...50 °C Pressure: 0...10 bar	+/- 0,5 % of end of measuring range		
pH	0...14 pH Temperature: 0...50 °C Pressure: 0...20 bar	+/- 0,1 pH	0,01 pH	
redox (ORP)	-1200 mV...1200 mV Temperature: 0...50 °C Pressure: 0...20 bar	+/- 10 mV	0,1 mV	
ammonia	0,01...17000 mg/l Temperature: 0...50 °C Pressure: 0...0,5 bar	+/- 0,2 mg/l (24 h) (0...10 mg/l) +/- 2 % of measured value (24 h) (>10 mg/l)	0,01 mg/l	
nitrate	0,4...60000 mg/l Temperature: 0...40 °C Pressure: 0...20 bar	+/- 2 mg/l (24 h) (0...40 mg/l) +/- 5 % of measured value (24 h) (> 40 mg/l)	0,01 mg/l	
chloride	1...35000 mg/l Temperature: 0...50 °C Pressure: 0...20 bar	+/- 2 mg/l (24 h) (0...40 mg/l) +/- 5 % of measured value (24 h) (> 40 mg/l)	0,01 mg/l	
ammonium	0,2...18000 mg/l Temperature: 0...40 °C Pressure: 0...1 bar	+/- 2 mg/l (24 h) (0...40 mg/l) +/- 5 % of measured value (24 h) (>40 mg/l)	0,01 mg/l	
sodium	0,2...20000 mg/l Temperature: 0...50 °C Pressure: 0...6 bar	+/- 2 mg/l (24 h) (0...40 mg/l) +/- 5 % of measured value (24 h) (> 40 mg/l)	0,01 mg/l	
calcium	0,5...40000 mg/l Temperature: 0...40 °C Pressure: 0...1 bar	+/- 2 mg/l (24 h) (0...40 mg/l) +/- 5 % of measured value (24 h) (> 40 mg/l)	0,01 mg/l	
fluoride	0,2...20000 mg/l Temperature: 0...40 °C Pressure: 0...1 bar	+/- 2 mg/l (24 h) (0...40 mg/l) +/- 5 % of measured value (24 h) (> 40mg/l)	0,01 mg/l	
potassium	0,4...39000 mg/l Temperature: 0...40 °C Pressure: 0...1 bar	+/- 2 mg/l (24 h) (0...40 mg/l) +/- 5 % of measured value (24 h) (> 40 mg/l)	0,01 mg/l	
chlorophyll a (optical)	0,03...500 µg/l Chl a Temperature: -2...50 °C Pressure: 0...60 bar	+/- 3 %	0,01 µg/l	
cyanobacteria (optical) - Phycocyanin (PC) - Phycoerythrin (PE)	2-40.000 ppb (PC) 0,15-750 ppb (PE) Temperature: -2...50 °C Pressure: 0...60 bar	+/- 3 %	1 ppb (PC) 0,01 ppb (PE)	
rhodamine WT (optical)	0,04...1000 µg/l RWT Temperature: -2...50 °C Pressure: 0...60 bar	+/- 3 %	0,01 µg/l	
turbidity (optical)	0...1000 NTU & 0...5000 NTU Temperature: 0...50 °C Pressure: 0...10 bar with wiper 0...20 bar without wiper	+/- 1 % of the respective end of measuring range	+/- 0,0125 % of the respective end of measuring range	
Total suspended solids (TSS)	approx. 5 fold measured range turbidity mg/l Temperature: 0...50 °C Pressure: 0...10 bar with wiper 0...20 bar without wiper
